

FROM BEYOND

by H.P. Lovecraft

Horrible beyond conception was the change which had taken place in my best friend, Crawford Tillinghast. I had not seen him since that day, two months and a half before, when he had told me toward what goal his physical and metaphysical researches were leading; when he had answered my awed and almost frightened remonstrances by driving me from his laboratory and his house in a burst of fanatical rage. I had known that he now remained mostly shut in the attic laboratory with that accursed electrical machine, eating little and excluding even the servants, but I had not thought that a brief period of ten weeks could so alter and disfigure any human creature. It is not pleasant to see a stout man suddenly grown thin, and it is even worse when the baggy skin becomes yellowed or greyed, the eyes sunken, circled, and uncannily glowing, the forehead veined and corrugated, and the hands tremulous and twitching. And if added to this there be a repellent unkemptness; a wild disorder of dress, a bushiness of dark hair white at the roots, and an unchecked growth of pure white beard on a face once clean-shaven, the cumulative effect is quite shocking. But such was the aspect of Crawford Tillinghast on the night his half-coherent message brought me to his door

after my weeks of exile; such the spectre that trembled as it admitted me, candle in hand, and glanced furtively over its shoulder as if fearful of unseen things in the ancient, lonely house set back from Benevolent Street.

That Crawford Tillinghast should ever have studied science and philosophy was a mistake. These things should be left to the frigid and impersonal investigator, for they offer two equally tragic alternatives to the man of feeling and action; despair if he fail in his quest, and terrors unutterable and unimaginable if he succeed. Tillinghast had once been the prey of failure, solitary and melancholy; but now I knew, with nauseating fears of my own, that he was the prey of success. I had indeed warned him ten weeks before, when he burst forth with his tale of what he felt himself about to discover. He had been flushed and excited then, talking in a high and unnatural, though always pedantic, voice.

“What do we know,” he had said, “of the world and the universe about us? Our means of receiving impressions are absurdly few, and our notions of surrounding objects infinitely narrow. We see things only as we are constructed to see them, and can gain no idea of their absolute nature. With five feeble senses we pretend to comprehend the boundlessly complex cosmos, yet other beings with a wider, stronger, or different range of senses might not only see very differently the things we see, but might see and study
